

FP-Y210 Loudspeakers
The Guide

FriendlyPressure
Full Colour FP-Y210

At Friendly Pressure, we blend timeless design aesthetics with cutting-edge production techniques. The result: future heirlooms with a distinctive character.

We are proud to introduce our flagship speaker line, the Full Colour Stereo. A deeply personal design endeavour inspired by the vibrant culture and aesthetic sensibility of 80s and 90s London.

With the Full Colour Stereo series, founder Shivas Howard Brown set out to rekindle the lively city-scenes of backyard barbecues in full swing. Doors and windows flung wide open, Dad's speakers blasting the likes of Wookie and Marvin Gaye, with family and friends flooding in through the front door and neighbours congregating over the back fences.

The name itself embodies the essence of our quest: full colour, high vibrations.

FriendlyPressure
Full Colour FP-Y210

The FP-Y210 Loudspeaker is the culmination of Friendly Pressure's last five years of research and development, forming the most compact yet punchy speaker in our production line. Perfect for house parties, with a slight risk of complaint from neighbours.

Built around our in-house designed, calculated and dampened Yuichi Aria horn, this model adopts the classic style of a highly sensitive speaker, yet is loaded with the heavy-weight punch from numerous iterations in crossover design, horn augmentation and Friendly Pressure tuning.

Low-end is dealt with using a 10" Driver with a hard pressed vented paper cone, producing well rounded bass-weight tuned to 33Hz by a flared 3D-Printed port at the rear of the cabinet. Remaining mid range and high frequencies come from a 1" ferrite compression driver coupled to its bi-radial horn, resulting in a wide and constant, wide range balanced dispersion. The speaker cabinets are crafted in Somerset by the Woodroffe family, with 50+ years of bespoke carpentry knowledge.

Product Details

Each FP-Y210 loudspeaker is designed, developed, hand-assembled, and finished in London. From start to finish, every unit is crafted with care to ensure exceptional performance and build quality, blending premium sound with a signature design aesthetic.

TIMELESS CUSTOM CABINETRY

Y210 cabinets are available in a range of veneers, with an Osmo oil finish providing a natural satin feel. All cabinets are fitted with a signature aluminum ring detail around the driver, also customizable for colour. Whether you want a natural, earthy look or something sleek and modern, the FP-Y210 is built for easy visual integration into your space.

PRECISION-TUNED CROSSOVERS

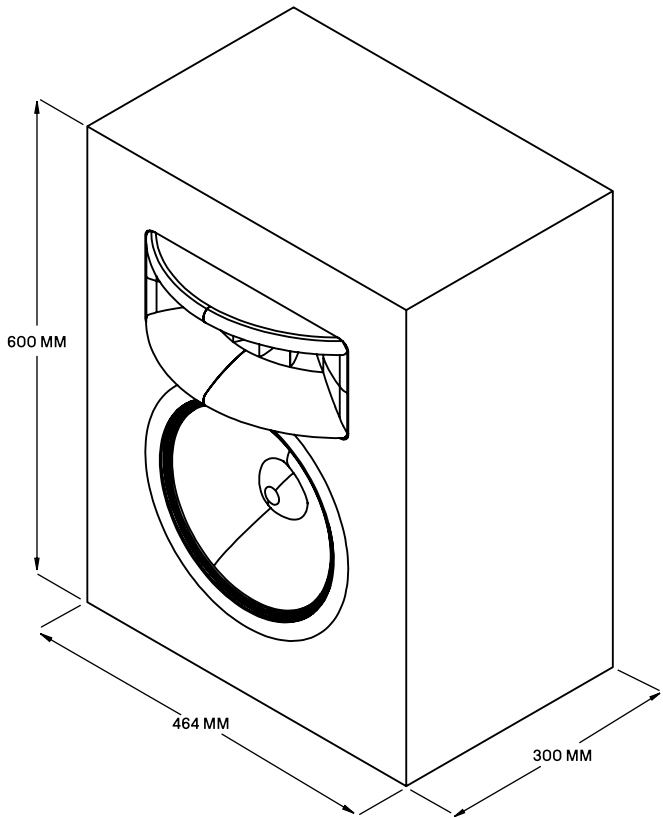

Our crossover design ensures phase accuracy, delivering a wide listening field and preserving the energy of your music. Like all Friendly Pressure crossovers, no economy electrolytic capacitors or high DCR inductors are used. Simplicity is key: our crossover reduces energy loss, so you'll hear every detail from high-resolution tracks, while even compressed streams maintain clarity and richness. Whether you're streaming from Spotify or playing high-res files, the Y210 brings out the best in your music.

AUDIO PERFORMANCE ACROSS GENRES

The FP-Y210 is engineered to deliver beautifully detailed mids, crystal-clear highs, and deep, textured bass, making it a versatile choice for any genre. Whether it's jazz, classical, rock, or electronic, the Y210 brings each track to life with accuracy and presence.

EASY PAIRING: BLUESOUND POWERNODE EDGE

To complete the experience, we've paired the FP-Y210 with the Bluesound Powernode Edge, a Wi-Fi streamer and amplifier that's unbeatable in both price and performance. With its warm, rich sound and discrete design, the Powernode Edge supports virtually any streaming service—including our favorite, Tunes Radio's NTS Channel 1.

Specifications

LOUDSPEAKER

1" Neodymium Compression Driver
10" Woofer with hard pressed vented paper cone
Yuichi Aria Horn - 3D Printed / silicone dampened

Height	600 MM
Width	464 MM
